**PROBLEM TO BE SOLVED:** To easily input a character string on a position separated from a receiving position.

**SOLUTION:** A remote input device 1 such as an OCR 11 collectively transmits the data of an inputted character string as a remote control signal and a set top box(STB) 5 receives the signal and decodes the signal to the original character string data. After storing the character string data, the STB 5 displays the data on a television receiver 6. Then the STB 5 accesses a terminal equipment on an interconnection network corresponding to the URL of the character string.
